Lessons learnt on WIN:

(1) Do not open the file in browser and Copy-Paste.

Instead, Rt-click, Save-File-As.

This is useful to remember in all contexts.

(2) set BISON_SIMPLE=bison.simple

- do not give any BLANK before/after =

- run it in same directory as the file is in. i.e. Don't give the full path.

(3) Run the Code-block version of flex, bison, and not the GNU version (applicable in Lab).

As the problem is solved, not very sure, exactly which (all) of (1),

(2), (3) caused the problem...

Interested folks can reverse-engineer, and let everyone know.
